21. Juni 2016

Übungen zur Vorlesung Computermathematik

Serie 13

If you participate in the last exercise-class, please hand in a printed version of your handout. This will be corrected by your tutor and counts as an additional short-test.

Aufgabe 13.1. Make a 10-minute beamer-presentation (max. 8 slides incl. titelpage) about your favorite result of the analysis or linear-algebra course. The presentation should contain the formulation, the proof (or ideas of the proof) and if applicable resulting implications. Save your talk as slides.tex in the directory `serie13`.

Aufgabe 13.2. Make a handout (4 slides per side) of your presentation and hand in a printed version to your tutor.
